Workshop 2 Peer Review

We could not find any executable file or any instruction on how to run your program. So the program could not run for us.

It would have been more helpful if you had provided some instruction on how to run the program so that we can look on the diagrams and start to compare them with the implementation.

Currently, the design/implementation has not passed the grade 2 criteria because we could not find any executable file to check if the diagrams relate to the implementation.
